Broadly speaking, UHTCs are borides, carbides, nitrides, and oxides of early ... **Stress corrosion cracking - Wikipedia** Stress corrosion cracking (SCC) is the growth of crack formation in a corrosive environment. It can lead to unexpected sudden failure of normally ductile metals subjected to a tensile stress, especially at elevated temperature. SCC is highly chemically specific in that certain alloys are likely to undergo SCC only when exposed to a small number of chemical environments. **High Performance Adhesives EPOXIES** Hardman **DOUBLE/BUBBLE** epoxies are strong and versatile. They contain no solvents, will not shrink, and cure at room temperature. Epoxies are effective over a wide range of temperatures for bonding to metal, glass, ceramics, **iCorrosion** Dr. Kane is currently president of iCorrosion LLC in Houston Texas. Most recently, he acted as Director, Corrosion Services with Honeywell Process Solution.
